

Wolverine

WHITEPAPER

EXECUTIVE SUMMARY

WHY WOLVERINE?

Wolverines are one of the most solitary, territorial creatures in the world. Whilst many may know of them through popular media formats, through comics or movie franchises, the animal itself is overlooked and ignored by much of the world. Similarly, many good projects within the Binance Chain Economy are overlooked – with devastating consequences for the chain.

The wolverine represents the spirit of our project – we are independent, great climbers and, most importantly, built to last. The primary goals of this project is twofold.

THE RUG MENTALITY

One problem of the BSC is that rugs, scams or honeypots are being conducted (as this is similar to what happens on ERC-20 and most other chain tokens), and new and even experienced investors are not prepared for their consequences, nor how to spot one – relying on scanner tools to determine the validity of a contract, for example, instead of going through standard DYOR which may reveal more information than an automated scan. Whilst we cannot stop bad actors from creating fraudulent tokens, we can educate the BSC space on how to avoid bad investments through learning.

THE SIMPLE SOLUTION

Wolverine will act as a rallying point for teaching new and existing investors about upcoming and standard practices within the BSC.

Firstly, we are an education project – one that aims to inform new investors of the pitfalls involved with investing into cryptocurrency. This will be done through our releases, some of which will help to generate income for the project.

Secondly, we are a charity project. We will be dedicating part of the accumulated charity wallet funds into preserving wildlife and habitats, such as North American forests, sea life preservation grounds and more.

THE OVERARCHING PROBLEM

The introduction of new coins to investors within the Binance Smart Chain poses the problem that many investors are not prepared for the BSC – especially if they only have a background in retail, high liquidity cryptocurrencies such as BTC, ETH, and ADA.

This means that there are imminent issues for those entering the Binance Smart Chain:

- 1. What is safe?**
- 2. What is profitable?**
- 3. How do I know whether a project is good from the moment it launches?**

These are questions that investors, both old and new, have been asking since the creation of the first scam.

THE TEAM

What separates wild wolverines and our team is that we work as a cohesive unit. As no-one man is an island – one man does not comprise our team.

We are dedicated to ensuring the growth of our token, and our collective teams' careers span from backgrounds in engineering, administration, website design, token development and law. We take utmost care in ensuring absolute transparency in our actions – and if we are requested to clarify on any actions we take by investors, then we will do so.

Our team believes in three main aspects when operating within the Crypto Industry:

SECURITY

Every single investor has the right to feel secure about their investment. Our first port of call is to render an audit of our contract prior to launch and publicizing these results

with immediate effect. We will be ordering further audits of our contract past launch date by a variety of different companies to further verify our contract is solid and secure.

INTEGRITY

Integrity means doing the right thing, even if it is to the team's detriment and even if there is no reward for doing so. The dev team will be prioritizing the growth of the token before anything

else. We will aim to never make decisions that impact the price of the token, and to refrain from taking no action at all when the token is in distress.

SUCCESS

We believe that every investor has the right to make successful investments when properly informed. We will do our best to bring the best marketing forward, and in this manner we have contacted and are working with modern marketing gurus and

planners within the BSC, who have had success in aiding other popular projects launch and grow in the past. We endeavour to release our use cases in reasonable time, so that the BSC can grow into a place where investors can purchase tokens with confidence.

ROADMAP

Q4

2021

Q1

2022

Q2

2022

Launch of \$WLV

Website and social media platforms are to be made publicly available.

Pre-launch marketing begins, with competitions for the whitelist made public with influencers, reddit posts and more.

CoinGecko Applications will be made on launch.

CoinMarketCap Applications will be made on launch.

Further marketing measures are taken.

Development of our first NFTs
First NFTs released to AirNFT for sale

First donation to the community chosen charity.

NFT giveaway to community members.

Beginning the development of a DAO and partnership with other projects for a staking and yield aggregation platform. Regular updates will be given on its progress.

Merchandise produced and distributed. Proceeds of merchandise will be under a registered, legal company which will act as a physical entity to distribute merchandise. Proceeds of sale will be reinvested into the development and growth of the project.

2nd Community choice charity poll or vote.

NFTs continue to be produced on BEP-20 and minted on AirNFT.

The Forest (a goods and services website focused on content creators and promoters) will be released.

Community giveaways in NFTs, ADA and more.

A professional website will go into development dedicated to learning more about cryptocurrency and technical analysis. This will be accompanied by recorded examples of how these techniques are used,

NFTs

Initially, our use case will be the production and competitive push of custom high quality NFTs and NFT rewards. This will establish an excellent connection to an expanding market (one that has grown by leaps and bounds in 2020 as a lucrative investment). To encourage the growth and expansion of the NFT market and space, we will list our NFTs on AirNFT, which features vastly reduced minting and sales costs compared to OpenSea on ERC-20, bringing a massive advantage to new investors who are averse to the large transaction fees operating on the Ethereum Network.

These NFTs will come in a variety of prices and terms, with the simplest NFTs being below 0.2-0.5 BNB, and the most expensive NFTs being collector's items for our

project. To increase the desirability of these NFTs, some will feature a special ability – the power to start a Frenzy at a time of their choosing, once per NFT owned, and only once for the lifetime of the NFT.

In practice, this means that the first to buy an NFT and use their Frenzy also has the power to create an almost Zero Barrier to Entry to Wolverine at their time of choosing. This could be used in a variety of ways, such as creating their own pumps or drastically increasing their holding without fear of fees. It would also be a way for these individuals to drastically increase their ADA rewards, as volume is expected to increase with the announcement of a Frenzy, especially as the community continues to grow.

The Forest

After sufficient time and care has been given to the creation of NFTs, we will then begin to develop our first unique use case, The Forest.

Right as we speak, there are thousands of people offering shilling, graphics, voting or other services in the crypto community. These people don't have a proper way of finding clients or proving their legitimacy to interested parties, so they spend many hours joining Telegram and sharing their offers.

Sadly, this just leads to them getting banned and their accounts deleted. The issue affects all crypto teams too, as there isn't a proper way for them to find graphic artists, shillers and other workers in the crypto ecosystem - leading to poor communication, lack of trust and ultimately, the downfall of many good projects. That's why we are creating The Forest, a platform made to solve these issues.

The Forest is a platform for people providing services for the cryptocurrency ecosystem. They will be able to share their services here instead of spending hours joining

telegram groups and praying they get clients. It would have 4 sections: graphics, promos, shilling, and votes.

Service providers would enlist themselves in their section by saying their Telegram username, name, previous works, method of payment, price list and description. There will also be a rating system for users to rate the promoters they hire and leave comments about them.

Finally, there will be a manual verification of promoters when they reach a certain number of good ratings, and they'll receive a Wolverine certified badge if they pass it. Holders of over \$250 worth of \$WLV will have discounts and their comments will be prioritized.

Further plans for future releases are in progress and are being discussed by the team with experienced members of the Crypto Industry. We hope to continue releasing platforms that adhere to our message of allowing good projects to flourish whilst bad actors are filtered out.

USE CASES

WolveRoot

In keeping with our goals to ensure the growth of good investors, we want to foster excellent roots of knowledge for retail investors within the BSC space. To do this, we will be releasing WolveRoot, an educational platform that strengthens the roots that support an investor's portfolio. This will not only include updates on new trends occurring within the BSC, but also new contract functions, how to spot bad actors, fraudulent contracts or indicators of whether a token is fraudulent or not.

We will be increasing the knowledge base of crypto investors. This will include technical analysis (TA) techniques and we hope to have crypto experts and investors create videos on our platform explaining each concept, such as EMA, RSI and Bollinger Bands.

Each video and sponsorship for the platform will implement non-intrusive ads (ads on the side or sponsorship from the video creator), which will be used to fund the platform, or paid options which will remove all ads for a connected wallet and open up exclusive content and options.

Further development of WolveRoot may include a dummy trading portfolio where investors can practice their abilities without the risk of losing their investments. We believe that experience is important, but using risk-free investment tools to practice and hone your abilities in a safe environment is better than risking actual capital during testing of your emerging trading strategy.

TOKENOMICS

TOKEN NAME: WOLVERINE

TOKEN TICKER: \$WLV

TOKEN STANDARD: BINANCE SMART CHAIN

TOTAL SUPPLY: 100B TOKENS

ANTI-WHALE MEASURES

MAX BUY: 0.5%

MAX SELL: 0.5%

TOKEN TAXATION

For the peace of mind of our investors, and in line with our policy to ensure fairness at all times and to minimise losses for our investors, our tokenomics are minimal for rewards tokens. Please note that the following information applies to the \$WLV token.

TOTAL TAX: 10%

MARKETING/ DEVELOPMENT/ CHARITY FEE: 5%

REFLECTIONS: 2%

LIQUIDITY POOL FEE: 2%

BURN FEE: 1%

CONTRACT SPECIFIC FUNCTIONS

Frenzy

A contract function which optimizes chart and \$ADA Rewards gains by vastly reducing buy-in tax and increasing sales tax for a limited period of time. The percentage change is as follows:

**10% Total Buy Tax to 5% Total Buy Tax
10% Total Sell Tax to 15% Total Sell Tax**

Frenzy X

A more powerful function which brings gains to their absolute maximum, with the following changes from our standard tokenomics:

**10% Total Buy Tax to 1% Total Buy Tax
10% Total Sell Tax to 30% Total Sell Tax**

The above functions will be activated prior to specified heavy marketing. Frenzy will be conducted during periods of expected high volume, such as heavy direct marketing to encourage retention and to discourage pump and dumps. Frenzy X will be available for limited periods of time when our new use cases are released and advertised, such as the Forest.

FINAL NOTE FROM OUR DEVS

Dear Investors,

Hey everyone, JP, Ganyō and Mo here. Me and my team have worked hard and will continue to work hard to ensure that this token succeeds.

The reason for us even starting this token is because we love the BSC and appreciate the sheer potential it can bring to cryptocurrency projects with its accessibility, speed and simplicity. As you may have guessed, some of our use cases don't target retail investors directly, such as The Forest.

This is because part of our project aims is meant for the benefit of cryptocurrency, rather than for the benefit of our project alone. We believe wholeheartedly in the adoption of cryptocurrency in the physical world, as well as the decentralised space. We believe that mass adoption and putting power and responsibility should go to the currency holders' hands.

With the elimination of scam projects and bad actors within the space, growth opportunities for legitimate, long term and high quality projects that enhance, rather than take from the industry will start to increase, making the space safer for all investors.

With this in mind, our team has come together to produce what we hope will be one of the most important projects in the BSC – one that works, not for the developer's profit, but for that of the investors and the space as a whole.

As you may know from reading this document, our team is committed to solving some real world problems as well. With the continued use of fossil fuels, excessive pollution and corporate greed, our world, in short, is dying. Wolverine aims to preserve what little wildlife remains, because there is no future of cryptocurrency without a future world to live in.

For those of you reading this whitepaper, our team thanks you for showing your interest, and we hope that you become part of our movement. We hope that our team grows in the future with like-minded individuals so that together, we can make a difference.

Yours Sincerely,

Wolverine Devs
